

Bio 135

Integument lab:

Objectives:

- Learn the layers of the integumentary system
- Be able to identify the accessory structures of the integumentary system
- Learn the structure of hair
- Learn the structure and location of the sense organs of skin
- Identify the cell types that make up the epidermis
- Identify the tissue type making up the dermis

Lab activities:

- View slides of skin showing layers of skin and cross sections of hair
- View the model of skin to identify the structures noted.
