

Bio 135 Lab exercise Muscles. (spring 2011)

On the following page is a list of muscles. These are the ones that have been deemed clinically significant by the health care programs at BCTC. Please review the list of muscles and look at the images on the virtual lab. You should be able to identify these muscles visually by looking at a model.

You should also answer the questions located in a separate document associated with the disc provided by your text. This document will be collected the week of the lab exam.

Muscle	Location and action of the Muscle
Head and neck	
Buccinator	
zygomaticus	
Masseter	
Occipito-frontalis	
Orbicularis oculi	
Orbicularis oris	
Sternocleidomastoid	
Temporalis	
Pectoral girdle and arm	
Biceps Brachii	
Brachialis	
Brachioradialis	
Deltoid	
Flexor digitorum	
Pectoralis major	
Pronator teres	
Supinator.	
Trapezius	
Triceps	
Thorax and abdomen	
External Oblique	
Intercostals	
Latisimus dorsai	
Rectus abdominus	
Pelvic girdle and Leg	
Adductor group (all three)	
Biceps femoris	
Gastrocnemious	
Gluteus maximus	
Gluteus medius	
Gracilis	
Rectus Femoris	
Sartorious	
soleus	
Tibialis anterior	
Vastus Lateralis	
Vastus Medialis
